I am a detail-oriented Front-End Web Developer skilled in React, Git, and Figma. My main focus is on creating engaging user interfaces with clean and maintainable code. I am always seeking new challenges and eager to learn new technologies such as Cloud Computing. Although I am currently a Front-End Developer, I aspire to become a Full-Stack Developer. I am a hardworking and dedicated individual who strives to exceed client expectations and deliver exceptional results.

EDUCATION

University
Kirinyaga University

07/2021 - Present   *Kirinyaga,Kutus*

Courses
- Bsc Software Engineering

High School
Anestar Premier High School

01/2017 - 04/2021   *Nakuru, Lanet*

PERSONAL PROJECTS

Weather Forecast Website (04/2023 - 05/2023)
- I developed a weather application that leverages the OpenWeatherMap API to provide users with up-to-date weather information for any valid city in the world. Upon entering a city name, the website displays both current and forecasted weather trends, giving users a comprehensive view of the weather conditions in their selected location.

PlayTube (01/2023 - 01/2023)
- I created a video player website that allows users to watch movies and listen to music. The project integrates the YoutubeV3 API from Rapid Api and is built using ReactJS, CSS, and HTML. With this website, users can easily search for and play their favorite videos and music tracks, all within a user-friendly and intuitive interface.

Car Renting Website (01/2023 - 02/2023)
- AutoHire is my car rental website that simplifies the process of selecting a car. Users can browse available cars and select their preferred vehicle, before being directed to the checkout page to enter their credit card information. With AutoHire, renting a car has never been easier or more convenient.

Personal Portfolio (12/2022 - 01/2023)
- I designed and developed a personal website that showcases my technical expertise and experience. The website provides detailed information about my skills, education, and past projects, giving visitors a comprehensive understanding of my capabilities in the technical field.

SKILLS

Web development · Git Version Control · ReactJs · HTML/CSS · UI Designing · MySQL · Communication · Teamwork · Azure Basics · Data Structures and Algorithm · Python · linux · Networking basics

ACHIEVEMENTS

Contributing to an open-source projecs (05/2022 - 03/2023)
Through collaboration with other developers on various projects, I have gained valuable experience and knowledge. During these interactions, I have not only learned a lot from others but have also shared my own knowledge and skills, allowing for mutual growth and development.

Building Responsive Projects (02/2022 - 08/2022)
Achieving responsive web design is a significant accomplishment that showcases proficiency in web development, including a solid understanding of HTML, CSS, and JavaScript. It also demonstrates the ability to design websites that adapt to different screen sizes and resolutions, providing a seamless user experience across all devices.

CERTIFICATIONS

Alx Software Engineering: (01/2022 - Present)
I am currently enrolled in a full-stack developer certification program, where I am expanding my knowledge of various technologies such as Linux, bash scripting, and Git. This program will equip me with the necessary skills to become a proficient full-stack developer.

Microsoft Azure Cloud: (01/2023 - 02/2023)
This certification has helped me gain a foundational understanding of cloud computing, which has sparked my passion for further learning in this area. I firmly believe that proficiency in cloud computing will be essential to my career growth and success.
